

ics-csrankings-sync

Configuring a remote for a fork

- `git remote add upstream https://github.com/emeryberger/CSrankings.git`

You must configure a remote that points to the upstream repository in Git to *sync changes you make in a fork with the original repository*.

This also allows you to *sync changes made in the original repository with the fork*.

Syncing a fork

- `git checkout upstream/gh-pages :`
- `git fetch upstream`
Fetch the branches and their respective commits from the upstream repository.
- `git checkout gh-pages`
Check out your fork's local `gh-pages` branch.
- `git merge upstream/gh-pages`
Merge the changes from `upstream/gh-pages` into your local `gh-pages` branch.
